Dorian Penin

Full Stack Engineer | Sales Tools

Software engineer with around seven years across embedded systems and web development, including three years building web applications. Hands-on experience with TypeScript, React, Next.js, authentication, permissions and API integration. Co-develop a collaborative scheduling product, translating user needs into features and tests.

> **Electronic music producer** for 15 years
> and **label manager** for 6+ years.

PROFESSIONAL EXPERIENCE

Independent Software Engineer 2023-present

Timelab

Co-founder and Product Engineer

• Co-develop a collaborative planning application for multi-stage festivals, sharing feature definition, UX and prioritization with my co-founder. **Two festivals** have used the product end to end.

• Build features across React/Next.js and the backend, including **organization and user permissions**. Implement **scheduling conflict detection** for people and equipment, with tests for timing boundaries.

• Translate festival organizers' feedback into product requirements. Diagnose and fix a **Google Sheets import issue** using logs, then verify the fix by successfully importing the same file.

CPTS Nougaro 2024-2025

Full-stack Developer

• Built a Next.js and Payload CMS website and **authenticated member area** with user profiles, favourites and transactional email notifications; collaborated with a designer on the interface.

Coin District 2025

Blockchain Protocol Engineer

• Researched, designed and implemented an **ERC-3643 / OnchainID** protocol combining identity-based transfer restrictions, operator roles and configurable asset permissions; tested allowed and prohibited operations with Foundry.

• Developed The Graph indexer and integrated its **GraphQL API** into Next.js API routes; used Hardhat for deployment and maintenance tooling.

Public code: github.com/coin-district/coindistrict-core

Gascon Procedes 2025

Full-stack Developer

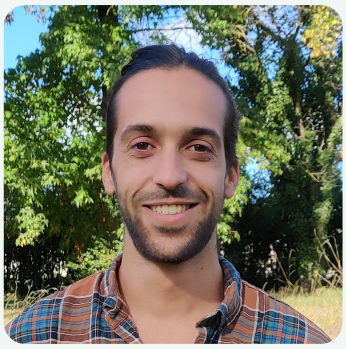

• Built a Next.js control interface on Raspberry Pi, connecting an ESP32 through UART and WebSocket. Added **diagnostic logging** and delivered an installable system image.

Sopra Steria Sep 2018-Jun 2022

Embedded Software Engineer

• Maintained C/C++ data-acquisition software on embedded Linux and developed Bash connectivity scripts and a C++/Qt simulation tool.

• Implemented **4G connection recovery** and quality checks; validated behaviour through software and physical disconnection tests and field trials.

TECHNICAL SKILLS

Frontend

TypeScript, React, Next.js, Tailwind CSS

Backend and data

Node.js within Next.js, Server Actions, Convex, Payload CMS, PostgreSQL via Payload, GraphQL, The Graph

Authentication and authorization

Clerk, authenticated member areas, organization and user permissions

Testing and systems

Vitest, Playwright, Foundry, Hardhat, C/C++, Bash, Python, Linux

EDUCATION

INSA Toulouse

Engineering degree in Control Engineering and Electronics Systems Engineering major
2012-2018

LANGUAGES

French (native)
English (fluent)
